

# IMPORTANT

Thank you for your purchase of this quality ACAN product. To ensure many years of trouble-free operation and to ensure the warranty is not voided, it is necessary to follow a few basic precautions.

1. Check for any damages or defects before installation.
2. **Install plumb, level and square, using shims and screwing through jambs into stud.** Adequately shim the window, ensuring sufficient shims are used under the operator and any joins in multiple units.
3. Check operation of unit immediately after installation.
4. Windows should be insulated by loosely installing fiberglass insulation or a fast curing polyurethane low expansion foam between jamb and framing. Over-insulation will cause bowing.
5. **Clean and lubricate** all moving parts, hardware, and vinyl tracks with a silicone spray, as required, or at least twice yearly.
6. Property owner should complete and return ACAN's Certificate of Registration in order to benefit from the Lifetime Warranty.
7. Please refer to CSA A440 (Window and Door Installation) for full installation details.

## HEALTH SMART WINDOWS™

### Shimming and Anchoring Windows

Please seal the heads of installation screws with caulking.
